Math F113X: Quiz 8

Name: Solutions score:_____ / 10

There are 10 points possible on this quiz. No aids (book, notes, etc.) are permitted. You may use a non-programmable calculator. **Show all work and supporting calculations for full credit. Explain how you get your answers.**

1. Consider the **scheduling digraph** below.

(a) (2 points) Label the vertices in your scheduling digraph using the **backflow algorithm**. Use square brackets [ ] for these labels. *A second copy of the digraph is provided in case you need to make corrections.* If you have labels on both digraphs, you must clearly label which one contains your final answer.

(b) (2 points) What priority list do you get if you prioritize the tasks using the **critical path algorithm**?

C	B	E	A	D	F	G
27	24	20	16	10	9	2

2. (2 points) Suppose a particular schedule has a critical time of 28 hours and it takes one processor 65 hours to complete all the tasks. Is it possible for there to exist a schedule for two processors that uses only 28 hours? Explain your answer with some words or a computation.

No. $\frac{65}{2} = 32.5$ so the best possible distribution of tasks would be for one processor to do 32 hours & one processor to do 33. Both are longer than 28 hours.

(A tabula recta is at the end of this quiz.)

3. (2 points) Encrypt the message **THANKSGIVING** using an alphabetic Caesar (shift) cipher with shift 4 (A to E).
